

## Horizontal Curve

### Problem 1:

Design a horizontal Alignment of a rural highway using following Data. Calculate necessary parameters for setting out **transition curve** and half of **circular curve**.

Deflection Angle ,  $\Delta = 45^\circ$

Chainage at PI = 5000 m

Design Speed of vehicle = 70 km/hr

Road width = 4m x 4 = 16.0 m

### Solution:

#### Step 1:

Radius of circular curve,  $R=?$

a) Decision making for  $e_{\max}$ ,

$$e_{\max} = 0.08$$

b)  $f_{\max} = ?$

$$\begin{aligned}
 \text{Design Speed, } V &= 70 \text{ km/hr} \\
 &= \frac{70 \times 1000 \times 3.28}{3 \times 1760} \text{ mph} \\
 &= 43.5 \text{ mph} \\
 &= \frac{70 \times 1000}{60 \times 60} \text{ m/s} \\
 &= \mathbf{19.44 \text{ m/s}}
 \end{aligned}$$

From AASHTO guideline, Table -III-6,

$$V = 40 \text{ mph} \Rightarrow f_{\max} = 0.15$$

$$V = 50 \text{ mph} \Rightarrow f_{\max} = 0.14 \text{ (safe side)}$$

$$\therefore f_{\max} = 0.14$$

$$\begin{aligned}
 \therefore e_{\max} + f_{\max} &= 0.08 + 0.14 \\
 &= \mathbf{0.22}
 \end{aligned}$$

c) Maximum superelevation,  $h_{\max} = ?$

Road width ,  $b = 4 \times 4 = 16 \text{ m}$

$$e_{\max} = 0.08$$

$$\begin{aligned} h_{\max} &= b \times e_{\max} = 16 \times 0.08 \\ &= 1.28 \text{ m} \\ &= 1.28 \times 3.28 \text{ ft} \\ &= 4.20 \text{ ft} \end{aligned}$$

d)  $R = ?$

$$\begin{aligned} R_{\min} &= \frac{V^2}{g(e+f)} = \frac{(19.44)^2}{9.8 \times (0.22)} = 175 \text{ m} \\ &= 575 \text{ ft} \end{aligned}$$

Decision making for  $R$ ,

$$\begin{aligned} \text{For } f=0, R &= \frac{(19.44)^2}{9.8 \times (0.08+0)} \\ &= 482 \text{ m} = 1528 \text{ ft} \end{aligned}$$

$$R = 400 \text{ m} = 1312 \text{ ft}$$

**Step 2 :****Length of transition curve**

Method A :

Arbitrary gradient method (1 in 50, 100, 200 etc)

Assume Longitudinal slope = 1 in 100

$$\frac{1}{100} = \frac{h_{\max}}{L} \Rightarrow L = h_{\max} \times 100 = 128m$$

Method C :

rate of change of radial acceleration

$$C = 1 \text{ ft/s}^3 \text{ for railroad} = 0.3 \text{ m/s}^3$$

$$= 1 \sim 3 \text{ ft/s}^3 \text{ for highways} = 0.3 \sim 0.9 \text{ m/s}^3$$

For high standard road ,  $c = 1 \text{ ft/s}^3 = 0.3 \text{ m/s}^3$ 

$$\therefore L = \frac{V^3}{RC} = \frac{(19.44)^3}{400 \times 0.3} = 60.3m$$

Decision Making for L

Use,  $L=100 \text{ m}$

**Step 3 :**

Calculate elements of circular and transition curve

$$\begin{aligned} \text{Spiral Angel, } \Delta_s &= \frac{L}{2R} = \frac{100}{2 \times 400} = 0.125 \text{ rad} \\ &= \frac{0.125 \times 180}{\pi} = 7.16^\circ = 7^\circ 9' 36'' \end{aligned}$$

Maximum deflection angle ,

$$\begin{aligned} \alpha_L &= \frac{0.125}{3} = 0.042 \text{ rad} = 2.39^\circ \\ &= 2^\circ 23' 24'' \end{aligned}$$

$$\text{Shift, } S = \frac{L^2}{24R} = \frac{100^2}{24 \times 400} = 1.042 \text{ m} = 3.42 \text{ ft}$$

$$TD_1 = 2/3 L = 66.7 \text{ m} = 218.67 \text{ ft}$$

$$D_1D_2 = 1/3 L = 33.3 \text{ m} = 109.33 \text{ ft}$$

$$\begin{aligned} \text{Total tangent Length} &= \frac{L}{2} + (R+S) \tan \Delta/2 \\ &= \frac{100}{2} + (400+1.042) \tan 45/2 \\ &= 216.117 \text{ m} \\ &= 708.86 \text{ ft} \end{aligned}$$

Apex Distance,

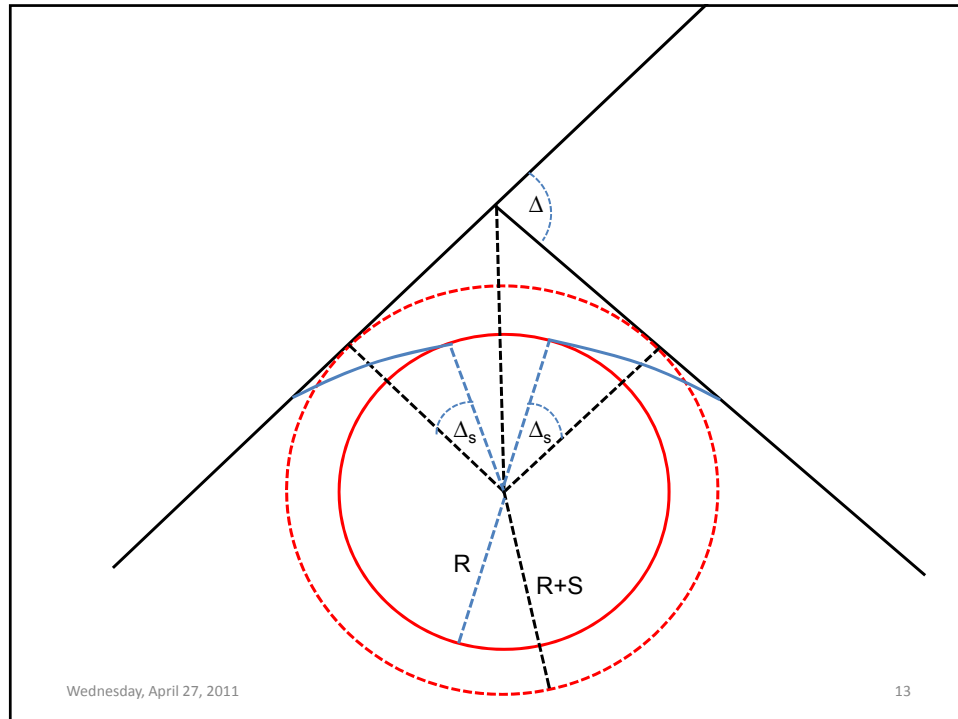

$$\begin{aligned}
 E &= \frac{R+S}{\cos \Delta/2} - R \\
 &= \frac{400+1.042}{\cos 45/2} - 400 \\
 &= 34.084m \\
 &= 111.80 ft
 \end{aligned}$$

Length of Circular Curve

$$\begin{aligned}
 &= R(\Delta - 2\Delta_s) \\
 &= 400 \times (0.785 - 2 \times 0.125) \\
 &= 214.159m
 \end{aligned}
 \quad \left| \begin{aligned}
 \Delta &= 45^\circ \\
 &= \frac{45 \pi}{180} \text{ rad} \\
 &= 0.785 \text{ rad}
 \end{aligned} \right.$$

Length of Combined Curve

$$\begin{aligned}
 &= 100 + 214.159 + 100 \\
 &= 414.159m
 \end{aligned}$$

$$\begin{aligned} \text{Change of } T_1 (PC) &= 5000 - 216.117 \text{ m} \\ &= 4783.883 \text{ m} \end{aligned}$$

$$\begin{aligned} \text{Change of } T_2 (PT) &= 4783.883 + 414.159 \text{ m} \\ &= 5198.042 \text{ m} \end{aligned}$$

*(Along the actual Road)*

$$\begin{aligned} \text{Maximum offset } Y &= 4S \\ &= 4 \times 1.042 \\ &= 4.167 \text{ m} \\ &= 13.67 \text{ ft} \end{aligned}$$

## Step 4 : setting out transition curve

$$\theta = \frac{l^2}{2RL} \quad \alpha \cong \frac{\theta}{3}$$

Unit of angle is radian in this formula

### Setting out transition curve

$$e_{\max} = 0.080$$

$$h_{\max} = 1.280\text{m}$$

| Peg stn. | l=x (m) | alpha (rad) | alpha (deg) | alpha (deg) | alpha (min) | alpha (sec) | y (m) | super elev (m) |

| 15        | 75    | 0.0234      | 1.343       | 1           | 20          | 34          | 1.758 | 0.960          |
| 16        | 80    | 0.0267      | 1.528       | 1           | 31          | 40          | 2.133 | 1.024          |
| 17        | 85    | 0.0301      | 1.725       | 1           | 43          | 29          | 2.559 | 1.088          |
| 18        | 90    | 0.0338      | 1.934       | 1           | 56          | 1           | 3.038 | 1.152          |
| 19        | 95    | 0.0376      | 2.155       | 2           | 9           | 16          | 3.572 | 1.216          |
| 20        | 100   | 0.0417      | 2.387       | 2           | 23          | 14          | 4.167 | 1.280          |

Step 5 :  
Setting out half circle

Using

Rankine's method of tangential deflection angle

### Rankine's method of tangential deflection angle

$c_1, c_2, c_3 = \text{known}$   
 $\delta_1, \delta_2, \delta_3 = ?$

$c_1 = R(2\delta_1)$   
 $\delta_1 = c_1 / 2R$

Wednesday, April 27, 2011 19

$\Delta = 180^\circ$

$\beta$

$\Delta_s$   $\Delta_s$

$R$   $R+S$

Wednesday, April 27, 2011 20

### Setting out half circle

$$\begin{aligned}
 R &= 400 \text{ m} \\
 \beta &= \Delta - 2\Delta_s \\
 &= 45 - 2 \times 7.16^\circ \\
 &= 30.676^\circ \\
 &= \frac{30.676 \times \pi}{180} \text{ rad} \\
 &= 0.5354 \text{ rad}
 \end{aligned}$$

length of circular curve = 214.16 m

$$\text{half circle} = \frac{214.16}{2} = 107.08 \text{ m}$$

If we make 18 chord in half circle,

$$\text{Length of each chord} = \frac{107.08}{18} = 5.949m$$

$$\text{Subtended Angle by each chord} = \frac{\beta/2}{18}$$

$$= 0.852^\circ$$

Tangential deflection angle by each chord =

$$\frac{0.852}{2} = 0.426^\circ$$

| chord | tangential deflection angle | chord length (m) | cumulative arc length (m) | Total deflection angle from common tangent |       |       | super elevation (m) |
|-------|-----------------------------|------------------|---------------------------|--|-------|-------|---------------------|
|       | (deg)                       |                  |                           | (deg)                                      | (min) | (sec) |                     |
| c1    | 0.426                       | 5.949            | 5.949                     | 0  | 25    | 34    | 1.280               |
| c2    | 0.852                       | 5.949            | 11.898                    | 0  | 51    | 8     | 1.280               |
| c3    | 1.278                       | 5.949            | 17.846                    | 1  | 16    | 41    | 1.280               |
| c4    | 1.704                       | 5.949            | 23.795                    | 1  | 42    | 15    | 1.280               |
| c5    | 2.130                       | 5.949            | 29.744                    | 2  | 7     | 49    | 1.280               |
| c6    | 2.556                       | 5.949            | 35.693                    | 2  | 33    | 23    | 1.280               |
| c7    | 2.982                       | 5.949            | 41.642                    | 2  | 58    | 57    | 1.280               |
| c8    | 3.408                       | 5.949            | 47.591                    | 3  | 24    | 30    | 1.280               |
| c9    | 3.835                       | 5.949            | 53.539                    | 3  | 50    | 4     | 1.280               |
| c10   | 4.261                       | 5.949            | 59.488                    | 4  | 15    | 38    | 1.280               |
| c11   | 4.687                       | 5.949            | 65.437                    | 4  | 41    | 12    | 1.280               |
| c12   | 5.113                       | 5.949            | 71.386                    | 5  | 6     | 46    | 1.280               |
| c13   | 5.539                       | 5.949            | 77.335                    | 5  | 32    | 19    | 1.280               |
| c14   | 5.965                       | 5.949            | 83.283                    | 5  | 57    | 53    | 1.280               |
| c15   | 6.391                       | 5.949            | 89.232                    | 6  | 23    | 27    | 1.280               |
