

Argumentative Essay Writing

❖ প্রশ্ন পড়ার পর... (কি ওয়ার্ড গুলো দাগাতে হবে এভাবে!)

1. <u>Not</u> consumers, manufactures are <u>mainly</u> responsible for environmental pollution .	8 Bank SO Written
2. <u>Only</u> fraudulent business syndicates are responsible for the price hike of essential commodities in Bangladesh.	Model Question

এই টাইপ যদি আসে তাহলে খেয়াল করুন পরিবেশ দূষণের অনেকগুলো কারণ! Mainly দিয়ে বুঝিয়েছে এটাই প্রধান কারণ কি না? Consumers Vs Manufactures কে সংখ্যায় বেশি/বেশি মাত্রায়/বেশি পরিমাণে পরিবেশ দূষণ ঘটায়?

আবার প্রাইস হাইক এরও অনেক গুলো কারণ Only দিয়ে এক ও একমাত্র কারণ বুঝিয়েছে! তাহলে স্বাভাবিকভাবেই আপনাকে এই স্টেটমেন্ট এর বিপক্ষে অবস্থান নিতে হবে।>অনেকগুলো কারণ আছে সেসব লেখায় তুলে আনতে হবে।>Fraudulent Business Syndicate যে একটা প্রভাবশালী কারণ এটা নিয়েও কিছু লিখতে হবে।>সরকার বা আইন প্রয়োগকারী সংস্থা চাইলে এই সিডিকেট ভাঙ্গার পাশাপাশি আরো কিছু পদক্ষেপ নিলে প্রাইস হাইক নিয়ন্ত্রণ করতে পারে।>Logical Conclusion(Must!) দিতে হবে। যেমনঃ

In conclusion based on the discussion stated above from logical point of views, it is obvious that besides fraudulent business syndicate there are so many reasons which are closely related and responsible for the **price hike** of essential commodities in Bangladesh. So. fraudulent business syndicates are partly responsible not the one and only reason for the **price hike** of essential commodities in Bangladesh.

❖ প্রশ্ন পড়ার পর... (টাইপ-২ Write Both 'For' and 'Against')

What do you know about your side of the argument and what do you know about the opposite side of the argument? A good way to organize your ideas is to use a **Pro & Con T-chart**. [Pro = in favor of thesis statement, Con = against thesis statement]

❖ **For Example:** Write Both 'For' and 'Against' the Motion of the following topic in English:

“Cell-phones should be allowed in classrooms.”

Pro = in favor of thesis statement	Con = against thesis statement
•	•
•	•

Similarly,

❖ **For Example:** Write Both 'For' and 'Against' the Motion of the following topic in English:

“Students Who Study Abroad Achieve Greater Success”

Pro = in favor of thesis statement	Con = against thesis statement
•	•
•	•

অর্থাৎ প্রশ্ন পাওয়ার পর উক্ত টপিকের পক্ষে ও বিপক্ষে কি কি পয়েন্ট/লজিক আছে তা আইডেন্টিফাই করা। এক তরফা বর্ণনামূলক লেখা যাবেনা। যেহেতু ৩০ নম্বর তাই উপরের মত করে রাফ/ব্লু প্রিন্ট করে/আগে পক্ষে বিপক্ষে নিজে বুঝে নেওয়া যেতে পারে।

General Tips	
DO	DO NOT
Use strong, convincing language.	Weaken your argument by using "I believe" or "I think."
Use reliable websites for research.	Make up "facts" or statistics.
Use 2-3 facts, examples, and/or statistics per body paragraph.	Rely on personal experiences.
Be respectful of those who disagree with your position.	Insult those who disagree.

Argumentative Essay Writing

In an **argumentative essay**, your job is make the reader agree with your opinion about a controversial topic. You have to **(1)** state your opinion, **(2)** give reasons to support your opinion, and **(3)** argue against the opposite opinion. Overall, you must **convince** the audience that your side of the argument is correct. To convince the audience, your essay must be balanced—it must include your viewpoint and the opposing viewpoint, or **counterargument**.

Even though you are arguing only one side of an issue, you must think about what the other side would say about your opinion. After you give the counterargument, you must **refute** it by showing that it is wrong. If your essay is balanced, a reader is more likely to agree with you.

ORGANIZATION

The most common type of argumentative essay has six paragraphs. Like all essays, it begins with an introduction and ends with a conclusion. In between are the body paragraphs where you must do three things: support your opinion, present the opposing point of view, and tell why that viewpoint is wrong.

INTRODUCTION	Paragraph 1	Hook Connecting/Background Information Main idea Statement/Thesis Statement
BODY	Paragraph 2	Support 1 (first reason) <ul style="list-style-type: none"> • Explanation, detail, example • Explanation, detail, example
	Paragraph 3	Support 2 (second reason) <ul style="list-style-type: none"> • Explanation, detail, example • Explanation, detail, example
	Paragraph 4	Support 3 (third reason) <ul style="list-style-type: none"> • Explanation, detail, example • Explanation, detail, example
	Paragraph 5	Opposite Side <ul style="list-style-type: none"> • Counterargument 1 • Refutation (ATTACK) • Counterargument 2 • Refutation (ATTACK) 
CONCLUSION	Paragraph 6	Repeat your thesis statement in different words Suggestion/Opinion/Prediction for the future

ORGANIZING THE ARGUMENTATIVE ESSAY

For an argument essay to be effective, you must organize your ideas, provide solid supporting evidence, and present the information clearly.

Introduction

The first paragraph is where you will hook the reader and state your claim. The **hook** is sometimes called a **lead**. The claim is the **thesis statement**.

Body Paragraph #1

This paragraph introduces the first reason that your claim is valid. Support it with evidence, such as facts, examples, and data.

Body Paragraph #2

This paragraph introduces the second reason that your claim is valid. Support it with evidence, such as facts, examples, and data.

Body Paragraph #3

This paragraph introduces the third reason that your claim is valid. Support it with evidence, such as fact, examples, and data

Body Paragraph #4

The paragraph should introduce an opposing claim, which is the counterargument. It also includes the turn-back, which takes the reader back to your claim and position.

Conclusion

The last paragraph restates the thesis statement and summarizes the main idea of the argument. It also contains a strong concluding statement.

[“Not Parents, rather Children should have the right to choose their career”](#)

The question of who should have the right to choose a child's career path is a topic of considerable debate and reflection. On one hand, there is a perspective that argues for granting children the sole authority in making career decisions, emphasizing their autonomy and personal growth. On the other hand, there are those who contend that parents should retain the predominant role in this process, drawing upon their experience and concern for their child's well-being. In this discussion, we will examine the merits of each viewpoint, analyzing the importance of personal autonomy, parental guidance, and the overall impact on the child's future. By delving into these contrasting perspectives, we aim to gain a deeper understanding of this complex issue surrounding the right to choose one's career path.

At first we will discuss on the favor of parents have more right to choose their children's career. Parents have more experienced to choose the career than their children. Some logical statements can be given below on the favor of parents' have the more right to choose their children's career.

Firstly, Parents, having lived longer and likely having more professional experience, may possess valuable insights into the job market, potential career paths, and the skills required for success. Their guidance can help children make informed decisions about their future careers. Secondly, parents often want the best for their children and make decisions with their children's well-being in mind. They may have a deeper understanding of their child's abilities, strengths, and weaknesses, and therefore can guide them towards careers that align with their skills and potential for success. Thirdly, parents are typically responsible for providing financial support to their children, including education and other resources necessary for career development. This financial investment gives parents a say in the decision-making process to ensure that their investment yields positive outcomes. Fourthly, Parents may prioritize stable and financially secure career choices for their children, driven by a desire to ensure their future well-being. They may lean towards established professions with reliable job prospects and higher earning potential, aiming to protect their children from financial instability.

Finally, with their life experience, parents can serve as mentors and provide guidance throughout the career selection process. They can share their own professional journeys, offer advice, and help children navigate challenges they may encounter along the way.

On the other hand, children have more right than their parents to choose children's career because they only lifetime lead their own life. There are some logical statements supporting the viewpoint that children have more right than their parents to choose their own career:

Firstly, Children, as individuals with their own unique talents, passions, and aspirations, should have the right to exercise autonomy in choosing their career. This principle of self-determination acknowledges that individuals are best equipped to make decisions about their own lives, including their professional paths. Secondly, allowing children to choose their own career enables them to pursue fields that align with their personal interests and

passions. When individuals are intrinsically motivated by their work, they tend to experience greater job satisfaction, fulfillment, and productivity. By granting children the right to choose their career, we foster their overall well-being and sense of purpose. Thirdly, children have firsthand knowledge of their own skills, talents, and aspirations. They understand their own preferences, abilities, and areas where they excel. By empowering them to make career choices, we enable them to leverage their strengths, leading to greater chances of success and personal growth. Fourthly, allowing children to choose their career promotes a sense of responsibility and accountability for their own growth and development. When individuals actively participate in making decisions about their future, they are more likely to invest time, effort, and dedication into honing the necessary skills and knowledge for their chosen field. Fifthly, the modern job market is constantly evolving, with new industries and career opportunities emerging regularly. Children, being more connected to current trends and technological advancements, may have a better understanding of the changing landscape and emerging professions. Granting them the right to choose their own career allows them to adapt and capitalize on these opportunities.

Finally, allowing children to choose their own career cultivates a sense of personal agency and resilience. It helps them develop the ability to navigate challenges, learn from failures, and make independent decisions. These skills are crucial for personal growth and future success in an ever-changing professional world. In summary we can say that recognizing children's right to choose their own career promotes individual autonomy, personal fulfillment, and responsibility. By empowering children to make informed decisions about their future, we support their personal growth, adaptability, and overall well-being.

We can make a conclusion by saying that it's worth noting that while these points present a logical perspective, it is essential to consider the balance between parental guidance and the autonomy of children. Striking a balance that respects the wishes and aspirations of children while benefiting from the wisdom and support of parents is often the most fruitful approach to career decision-making. A collaborative approach that considers both perspectives can lead to more well-informed and fulfilling career decisions.

Only Fraudulent business syndicates are responsible for the Price Hike of essential commodities in Bangladesh

The price hike of essential commodities in Bangladesh has caused significant financial strain on the population. While multiple factors contribute to this issue, it is crucial to recognize that fraudulent business syndicates bear the exclusive responsibility for driving up prices. Their manipulative practices, market control, and exploitative tactics have a direct impact on the affordability of basic necessities, adversely affecting the welfare of Bangladeshi citizens. This argument will shed light on the key reasons for the price hike of essential commodities in Bangladesh.

Fraudulent business syndicates have the ability to manipulate the supply and demand of essential commodities, allowing them to control prices. By colluding with suppliers, these syndicates artificially limit the availability of goods in the market, creating an artificial scarcity. This scarcity drives up prices as consumers are forced to pay inflated amounts for basic necessities. Such manipulative tactics highlight the detrimental impact these syndicates have on the affordability of essential commodities.

Another tactic employed by fraudulent business syndicates is hoarding essential commodities. They stockpile large quantities of goods and create an artificial shortage, leading to an imbalance between supply and demand. As a result, prices surge, and consumers suffer the consequences. Moreover, these syndicates engage in speculative practices, driving up prices further by taking advantage of market fluctuations and consumer desperation. The actions of these unscrupulous entities exacerbate the price hike problem, causing financial hardship for ordinary citizens.

Fraudulent business syndicates take advantage of the vulnerabilities within the supply chains of essential commodities. They exploit loopholes, bribe officials, and engage in illegal practices to gain control over the distribution network. Through their influence, they disrupt the smooth flow of goods, leading to supply shortages and increased prices. Their exploitative tactics contribute significantly to the price hike problem.

The price hike of essential commodities in Bangladesh cannot be solely attributed to fraudulent business syndicates. Various external factors, such as global market trends, international trade policies, and natural disasters, also influence the prices of goods. As Bangladesh heavily depended on importing, fluctuating commodity prices on the global market can significantly impact the cost of imports, leading to price increases that are beyond the control of local syndicates.

The inefficiencies within Bangladesh's distribution and storage systems contribute to the price hike issue. Inadequate infrastructure, lack of proper storage facilities, and inefficient logistics increase the costs associated with transporting essential commodities. These factors are also responsible for the inflated prices faced by consumers.

In conclusion, fraudulent business syndicates are the main culprits to contribute the price hike of essential commodities in Bangladesh, while some external factors are also responsible for this. Their manipulation of supply and demand, hoarding practices and the absence of adequate regulatory measures all contribute to this issue. To address the problem effectively, the government must strengthen regulatory frameworks, enhance market oversight, and impose strict penalties on those involved in fraudulent practices.

1. Argumental Writing in English: "Social Media has enhanced Human Communication and Trust"

BB Officer
Written

Social media has enhanced Human Communication and Trust

Scholars have different viewpoints regarding social media has enhanced Human Communication and Trust. Some people contend that the assertion is true, while others reject it and think it is untrue. Before outlining my viewpoint in this writing, I shall go deeper into the subject.

To begin with, there are numerous numbers of logic regarding the statement: social media has enhanced Human Communication and Trust. First & foremost, Social media platforms like Facebook, Twitter, and Instagram have facilitated faster, more practical, and open communication with a larger audience. Time and distance were restrictions on earlier forms of communication, such as letters and phone calls. We can instantaneously communicate with friends, family, and acquaintances from all over the world through social media, despite time zone and location limitations.

Moreover, Social media has become a powerful platform for sharing ideas, opinions, and experiences, allowing us to connect with individuals from different cultures, backgrounds, and ideologies. This exposure to diverse perspectives broadens our understanding of the world and helps us develop empathy and tolerance.

Furthermore, Social media has provided a platform for individuals to find like-minded people and form communities based on shared interests, beliefs, or causes. This sense of belonging and connection fosters trust

among individuals within these communities. For instance, online support groups, hobby forums, and professional networks have emerged on social media, creating spaces for people to connect, exchange advice, and find support. These communities help bridge the gap between individuals who may have never met in person but share common goals or interests, enhancing communication and building trust based on shared experiences. Social media has also played a crucial role in holding individuals, organizations, and institutions accountable. It has given a voice to those who were previously marginalized or ignored, providing a platform for them to share their stories and advocate for change. By promoting transparency, social media has led to increased accountability in various spheres of society, such as politics, corporate practices, and public service.

However, contrary to popular belief, social media platforms have had a detrimental impact on human communication and trust. Initially, Social media has revolutionized the way we communicate, but it has also led to a decline in face-to-face interaction.

Instead of engaging in meaningful conversations and genuine connections, people often resort to quick and impersonal exchanges on social media platforms. The allure of virtual communication has made individuals more comfortable interacting through screens rather than engaging in personal interactions. As a result, the richness and depth of human communication have been compromised, leading to a decline in authentic connections and meaningful relationships. Furthermore, Social media platforms have become breeding grounds for the spread of misinformation and fake news. With the ease of sharing content and the lack of stringent fact-checking mechanisms, false information can quickly go viral and influence public opinion. This has eroded trust in the information we encounter on social media, as it becomes challenging to distinguish between reliable sources and deceptive content.

In conclusion, after analyzing all the points, in favour of both the views, I like to opine that the statement which was given is true. While criticisms of social media abound, it is important to recognize its positive impact on human communication and trust. The accessibility, exposure to diverse perspectives, community-building, and accountability fostered by social media platforms have undeniably enhanced our ability to communicate effectively and establish trust-based relationships. As society continues to navigate the evolving landscape of social media, it is crucial to leverage its potential for positive change, while addressing its challenges, to ensure that it continues to play a constructive role in human communication and trust-building.

1. Not consumers, manufactures are mainly responsible for environmental pollution.

8 Bank SO
Written

Not consumers, manufacturers are mainly responsible for environmental pollution

Environment is mostly polluted by human being, directly or indirectly. Consumers and manufacturers are the biggest part of those human being who are said to be responsible for environmental pollution. But whether only consumers or manufacturers are the main culprit of environmental pollution is really an arguable topic. It is very usual that people hold different views over a controversial topic like this and are inclined to put forward strong feelings and reasoning in favour of their arguments. So, before drawing my opinion, let's discuss the matter deeply.

Consumer behavior plays a significant role in issues related to the environment. For example, if consumers purchase products that are harmful to the environment, this can contribute to environmental pollution. Conversely, if consumers purchase environmentally friendly products, this can help to reduce environmental issues. For instance, if consumers are interested in purchasing environmentally friendly products, companies will be more likely to produce these goods. Additionally, if consumers are willing to pay more for environmentally friendly products, this provides an incentive for companies to produce more of these items. Furthermore, consumer behavior can influence public opinion on environmental issues, ultimately leading to government

policy changes. So it is clear that, consumers can play both positive and negative role for environment. But in reality, consumers are less conscious about environment pollution. Instead of using environment friendly products, they use environmentally harmful products. For example, According to the World Bank, in December 2021, Bangladesh was one of the top countries in the world in terms of plastic pollution. The annual per capita plastic consumption in Dhaka alone is 22.25kg. Not only this, consumers discharge their plastic wastage recklessly on roads, canals etc. many other open places which creates environment pollution. So in reality consumers are playing negative role for environment and are responsible for environmental pollution.

Similarly, Manufacturers are also responsible for environmental pollution. The manufacturing sector provides substantial opportunities for economic growth in developing countries but is frequently associated with high levels of pollution and environmental degradation. There are many reasons like poor pollution management and control. Weak regulatory environment is also responsible for environmental pollution through manufacturing processes. Manufacturers of developed countries generally use effluent treatment plant(ETP) for waste management that reduces environmental pollution in a greater extent. But in under developed and developing countries like Bangladesh, most of the manufacturing plants do not have ETP system. As a result, they discharge their manufacturing wastage into river, canal, sea etc. many other unauthorized places. Thus, manufacturers are polluting the environment frequently.

So, from the above mentioned discussion, I opine that, not only manufacturers but also the consumers are equally responsible for environmental pollution.

1. It is not unethical to Acquire Exceptionally High Financial Assets.

9 Bank Offi
Written

There is an enormous amount of debate on the topic of whether it is unethical to acquire exceptionally high financial assets. Intellectuals, elites and even common people get divided while giving comments on the topic. Some people opine that acquiring high financial assets is not questionable as there is no legal and moral hindrance in it. But some other people argue that it is always suspicious whether the rich have taken any illegal means to gain such high financial assets.

In the following paragraph I am writing in favour of and in against of the argument as an independent observer. And lastly I will provide my opinion prudently.

A lot of people think that the high financial gainers should not be questioned as there is no legal hindrance against it. One can start a business with minimum assets. But he can be the richest person through his effort and innovation. For example, we can mention the name of Samson H. Chowdhury who is the founder of Square Group. At the very inception of his journey, he started his business with limited resources. But due to his vision and innovation he got success. Now it is worth mentioning that Square group has acquired unbelievable success in the sector and thousands of officials, labors are working for this company which is eventually reducing unemployment and poverty in our society. So it must be noted that the high financial asset gainers are also impacting our society in a positive direction. They are running their institutions for their personal interest but the economy is getting strengthened through their social, financial and charitable activities. Due to these reasons some people opine that it is conducive for the society and the economy to have high financial assets.

In contrast, it is also prevailing in society that attaining high financial assets is demonizing on ethical grounds. It is well known that high assets accumulate bragging in the personal sphere which eventually is used to demean the common people. It is also opined that the rich used their illegal interference to have personal interest in the policy making level. Besides, they escape tax paying which is literally illegal according to the state law. All illegal means are immoral on ethical grounds. So all the opinions against the argument are commendable.

Overviewing all the opinions which are in favor of and in against of the argument, my opinion is it is not unethical to have high financial assets. The point is that there are no legal barriers according to our state laws and social norms. All the opinions against the argument are based on social perceptions which are not sufficient to make a final decision. However, the financial assets gainer are doing great in the economy and Charitable ground which bolsters the ethical ground of attaining exceptionally high financial assets.

Social media brings more harm than good

Media has always had the power to influence our society, but it wasn't until the social media boom that we saw it on this scale and magnitude. In many instances, teenagers use their free time by browsing the Internet through social media. Whether it's checking a friend's latest Instagram post or viewing their recent Snapchat story, most would agree that social media is a big part of many people's day-to-day lives. While it has the potential for good, social media has been also been harmful to society because of how we use it. Therefore, social media has a large impact, yet the impact can be seen as negative in many aspects.

Social media is a big outlet for cyberbullying among teenagers. According to Help Guide, about 10 percent of teens report being bullied on social media, and even more claim they have been the recipient of offensive remarks. Being on the receiving end can lead to lower self-esteem and self-image. Cyberbullies can use the mask of the Internet to taunt others with no real interaction. This leaves those on the other side of the screen to feel the same effects as a real-life event with less effort put in by the bully. Social media is marketed as an escape yet cyberbully victims can't avoid harassment on it. In addition, bullies have access to the internet all day, leading to persistent behavior.

Social media can lead to decreased self-esteem. Many people choose to make their lives seem very glamorous on social media and only put their best foot forward. While this may not be the reality, this leaves others to feel their lives aren't good enough. They see a post and compare their own lives to it and conclude that it doesn't measure up. This issue is particularly prevalent in teenage girls with negative body image. A model on Instagram may have the "perfect" body, leaving the viewer to doubt their own appearance. Approximately 51% of respondents in an American study conducted by (Pew Research Center about relationships and dating in the digital age) answered that their partner is often distracted by the phone while trying to have a conversation with him. The constant interruption in communication between partners can lead to frustration, jealousy, and temptation to check your partner's phone. Also, according to the same study, younger social media users are more likely to spy on their ex-partners on social media or to talk and reveal personal information about their love lives, which can also lead to jealousy and dissatisfaction within a relationship.

Social media was originally intended as a way for others to communicate with each other in a new way. With increasing technology, people are always looking for interaction with others without having to physically make the journey to see them. However, when younger generations have unlimited access to social media, it becomes a negative outlet. With constant posts and pictures being put in front of them, it all becomes too much. Teenagers are forced to handle an overwhelming amount of anxiety due to social media's constant availability.

To decrease social media's impact, people should try to limit the amount of screen time on those apps. Social media has caused people to be more dependent on checking their phones. FOMO has become a common theme, and often leads to continual checking of social media sites. The idea that you might miss out on something if you're not online can affect your mental health. If one limit the amount of time spent on a media platform, they would be less likely to pick up their phone in general. This would decrease the amount of wasted time through technology. Additionally, a person could take a break from social media for a period. This would provide a vacation to the toxicity of the platforms. While not all social media is negative, its influence is harmful to many people. If social media is restricted, there will be fewer people struggling to face the anxiety it causes.

In conclusion, while social media has undoubtedly brought many benefits, it is important to recognize its potential negative effects. As users, we must be mindful of the impact social media is having on our lives and take steps to mitigate any negative consequences. Social media companies also have a responsibility to do more to address the harmful effects of their platforms and promote responsible use. Ultimately, it is up to all of us to determine whether social media is doing more harm than good and to act accordingly.

There are lots of negative effect of social media on our everyday lives. Besides those social media can also be beneficial for our society. It can help individuals connect and deepen their relationships. Social media also encourages students to learn and grow. And it can empower businesses to build their audiences and boost their bottom line.

The positive effects of social media are plentiful. According to a Harvard study, routine social media use is positively associated with social wellbeing, self-rated health and mental health. We just need to be mindful users and keep a healthy perspective about social media's role in our lives. Then we can use it to inspire, educate, show empathy, and become better communicators.

Social media is one such media, which is different from all other media. Social media creates a virtual world through the Internet, which the user can access by using any social media platform. In today's era, social media has become an important part of life, which has many features such as providing information, entertainment, educating mainly. Social media can make it easy to find groups of like-minded people or make new friends. Finding a close-knit community can help us feel valued and accepted. Social media is also an easy way to nurture existing relationships with family and friends who have moved away. Send messages, share photos, call, or host video chats to stay in touch.

Billions of people worldwide use social media networks. In terms of marketing, it is the most cost-effective way to reach mass amounts of consumers. Consumers that support a cause, product or service are more likely to share posts from major corporations and non-profit organizations. Charitable organizations tug at the heart strings of the general population. One of the benefits of marketing through social media, especially where charities are concerned, is that consumers and supporters worldwide can contribute. Making a contribution online can be done from anywhere in the world. Gaining global attention for a cause or major product release creates a buzz and draws attention to the original poster, in a positive manner.

There are an estimated 4.4 billion people worldwide that do not have Internet access, according to statistics. Noting what areas of the world lack access helps developers understand the basic needs of a specific demographic group faster. This may mean that companies could step forward and bring technology to these underdeveloped areas for a more cohesive global connection in the future. Such efforts have been discussed at conferences for social good through technology. An example of how technology works to improve social good is connecting families via VoIP conversations from locations around the world following a major natural disaster or tragedy. Loved ones living in different countries spend an extended amount of time worrying about the status of their friends and families due to lines of communication being down. Signals created for Wi-Fi during these times would allow those connections to take place. It would also allow global leaders to reach out to other countries for assistance.

When natural disaster strikes and causes devastating destruction, social media is the ideal vehicle to deliver messages asking for support. Hashtags are created to help Internet users locate related stories and show their support for those affected by the disaster. This helps stories that begin locally to gain national or global attention. More entities can be step-up to assist localities requiring assistance and raise funds to help those affected.

Although some parents see social media as detrimental to their children, it does some good to have social media accounts. Teens want to be aware and informed just as much as adults. Using social media allows teens to follow organizations and causes that they believe in. It makes them feel like they are a part of something, even when

they feel like an outcast in society. Increased teen awareness is important. Social media is one of the best outlets to reach the minds of young people to make a real difference.

In today's world, many of us rely on social media platforms such as Facebook, Twitter, Snapchat, YouTube, and Instagram to find and connect with each other. While each has its benefits, it's important to remember that social media can never be a replacement for real-world human connection. It requires in-person contact with others to trigger the hormones that alleviate stress and make you feel happier, healthier, and more positive. Ironically for a technology that's designed to bring people closer together, spending too much time engaging with social media can make you feel lonelier and more isolated and exacerbate mental health problems such as anxiety and depression. If you're spending an excessive amount of time on social media and feelings of sadness, dissatisfaction, frustration, or loneliness are impacting your life, it may be time to re-examine your online habits and find a healthier balance.

Social media itself is controversial. It is not all arguments, drama and controversy. Social media does have plenty of uses for good purposes. When news needs attention and causes need supporters, using social media outlets is the best way to reach a mass number of readers as not all stories make it to local news channels for distribution.

“Increasing the price of fuel is the best way to address traffic and pollution problem”

I do not agree with the argument.

Justification:

For few decades, the world has faced an unprecedented increase in traffic congestion, and this pollution results in significant environmental pollution. Some experts believe that rising fuel costs are the best way to address these issues. But the main tool for the development of modern civilization is energy. So, in my opinion, I fully believe that the use of other sustainable sources of energy, such as solar, wind, and hydro, will greatly help address such issues.

We know a classical economic theory that explicitly argues that the higher the price, the lower the demand for a product and vice versa. For this, some environmental experts believe that increasing the price of fuel will reduce its use and thus reduce increasing congestion and pollution. But the reality is that, despite the rise in fuel prices, people will continue to use it because they don't have any other viable option available to drive. Moreover, it will not change enough to solve the growing traffic problem and pollution. In fact, due to the increase in the price of fuel, the cost of daily goods can increase due to the increase in the cost of transportation, which creates a detrimental effect on the economy. On the other hand, if more sustainable energy such as solar energy, wind power, and hydropower are used to drive vehicles and factories, emissions of harmful gases such as carbon monoxide and CFCs will be lower, which significantly increases air pollution. In addition, using solar energy to drive public vehicles will result in cheaper fare.

However, we don't ignore this idea because fossil fuels really do irreparable damage to the environment. At the same time, some people who use vehicles only for comfortable travel reduce the use of fossil fuels due to the increase in fuel prices. But, the entire socio-economic system will be hampered because more people need more production and for more production, energy is an important raw material for the productive industry.

In conclusion, raising fuel prices is not the best way to address rising congestion and pollution. Thus, an effective way to control the aforementioned problems is to focus on increasing the production of renewable sources of fuel to replace fossil fuels that can significantly reduce traffic and pollution problems.

For Example: Write Both 'For' and 'Against' the Motion of the following topic in English:

As online learning becomes more common and more and more resources are converted to digital form, some people have suggested that public libraries should be shut down and, in their place, everyone should be given an iPad with an e-reader subscription.

Proponents of this idea state that it will save local cities and towns money because libraries are expensive to maintain. They also believe it will encourage more people to read because they won't have to travel to a library to get a book; they can simply click on what they want to read and read it from wherever they are. They could also access more materials because libraries won't have to buy physical copies of books; they can simply rent out as many digital copies as they need.

However, it would be a serious mistake to replace libraries with tablets. First, digital books and resources are associated with less learning and more problems than print resources. A study done on tablet vs book reading found that people read 20-30% slower on tablets, retain 20% less information, and understand 10% less of what they read compared to people who read the same information in print. Additionally, staring too long at a screen has been shown to cause numerous health problems, including blurred vision, dizziness, dry eyes, headaches, and eye strain, at much higher instances than reading print does. People who use tablets and mobile devices excessively also have a higher incidence of more serious health issues such as fibromyalgia, shoulder and back pain, carpal tunnel syndrome, and muscle strain. I know that whenever I read from my e-reader for too long, my eyes begin to feel tired and my neck hurts. We should not add to these problems by giving people, especially young people, more reasons to look at screens.

Second, it is incredibly narrow-minded to assume that the only service libraries offer is book lending. Libraries have a multitude of benefits, and many are only available if the library has a physical location. Some of these benefits include acting as a quiet study space, giving people a way to converse with their neighbors, holding classes on a variety of topics, providing jobs, answering patron questions, and keeping the community connected. One neighborhood found that, after a local library instituted community events such as play times for toddlers and parents, job fairs for teenagers, and meeting spaces for senior citizens, over a third of residents reported feeling more connected to their community. Similarly, a Pew survey conducted in 2023 found that nearly two-thirds of American adults feel that closing their local library would have a major impact on their community. People see libraries as a way to connect with others and get their questions answered, benefits tablets can't offer nearly as well or as easily.

While replacing libraries with tablets may seem like a simple solution, it would encourage people to spend even more time looking at digital screens, despite the myriad issues surrounding them. It would also end access to many of the benefits of libraries that people have come to rely on. In many areas, libraries are such an important part of the community network that they could never be replaced by a simple object

যে কোন টপিকে আপনি ৩ পেইজ আর্গুমেন্ট লিখতে পারছেন কি না? প্যাসেজ উত্তর না দেখেই সলভ করতে পারছেন কি না? আপনার কলম চলছে কি না? এটা এনশিওর করতে হবে।

Argumentative Writing-30

- Engineer's BCS Care এর Argument Writing Technique-1 এর ফরম্যাট ফলো করতে পারেন।
- 'প্রতি ১৮ মিনিটে মিনিমাম ২.৫/৩ পৃষ্ঠা' করে ফ্রি হ্যান্ড এ লিখবেন/লিখতে চেষ্টা করবেন।

সরাসরি কমন আসে না/আসবে নাহ। ব্লু প্রিন্ট করে নিয়ম কানুন মেনে ফ্রি হ্যান্ড রাইটিং এ লিখে আসতে হবে।

1. Introduction (Paragraph 1)

A. Hook: _____

B. Connecting Information: _____

C. Thesis Statement: _____

2. Body

A. First Reason (Paragraph 2) topic sentence: _____

Support

1. _____

2. _____

3. _____

B. Second Reason (Paragraph 3) topic sentence: _____

Support

1. _____

2. _____

3. _____

C. Third Reason (Paragraph 4) topic sentence: _____

Support

1. _____

2. _____

3. _____

D. Counterargument (Paragraph 5)

1. Counterargument #1: _____

Refutation (attack): _____

2. Counterargument #2: _____

Refutation (attack): _____

3. Conclusion (Paragraph 6)

A. Restated Thesis: _____

B. Opinion/Suggestion/Prediction: _____
